

**Spring Glory Serviceberry**  
*Amelanchier canadensis 'Spring Glory'*

Height: 10 feet

Spread: 10 feet

Sunlight: ☉ ●

Hardiness Zone: 3b

Other Names: Shadblow

**Description:**

A radiant large shrub with stunning fall colors, ideal for small home landscapes; showy white flowers in spring and sweet berries in June; a versatile choice for gardens or screening

**Ornamental Features**

Spring Glory Serviceberry is bathed in stunning clusters of white flowers rising above the foliage in early spring before the leaves. It has green deciduous foliage. The oval leaves turn an outstanding orange in the fall. It produces black berries in late spring.

This plant is primarily grown as an ornamental, but it's also valued for its edible qualities. The small round tart berries are most often used in the following ways:

- Cooking
- Preserves

**Landscape Attributes**

Spring Glory Serviceberry is a multi-stemmed deciduous shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance shrub, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting birds to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Spring Glory Serviceberry is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use
- Naturalizing And Woodland Gardens

### **Planting & Growing**

Spring Glory Serviceberry will grow to be about 10 feet tall at maturity, with a spread of 10 feet. It tends to be a little leggy, with a typical clearance of 3 feet from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 40 years or more. While it is considered to be somewhat self-pollinating, it tends to set heavier quantities of fruit with a different variety of the same species growing nearby.

This shrub does best in full sun to partial shade. It is quite adaptable, preferring to grow in average to wet conditions, and will even tolerate some standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This is a selection of a native North American species.
